                                                                      Matches 448;
                                                                                                        Query Match
                                                                                                                                                                         aromatic compound such as indene, 1.2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1.4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzoturan, dibenzoturan, yl0-dihydroanthracene, or 9,10-dihydroanthracene, or 9,10-dihydrophenanthracene corresponding dihydro dihydroxy compound. The polypeptides and the hosells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represent anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                      related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (-or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also used in bioremediation in which they oxidise an involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an host cells are also used in bioremediation in which they oxidise and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pseudomonas sp. strain NCIB 9816-4; naphthalene dioxygenase; NDC inducible multi-component enzyme; alpha subunit; mutant; chiral polymer; resin; pharmaceutical; rubber industry; bioremediation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a naphthalene dioxygenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Parales R,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Db
                          The present invention describes a naphthalene dioxygenase (NDO) or NDO related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydroxy-1,2,3,4-tertahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dih
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 benzocyclohelpt-1-ene, anthracené, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, dibenzofuran, elimenzofuran, dibenzofuran, dibenzofuran, perceptiophene, plothydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represent a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                               Pseudomonas
                                                                                                                                         Pseudomonas sp. strain NCIB 9816-4; naphthalene inducible multi-component enzyme; alpha subunit;
                                                                                                                                                                                                                 09-NOV-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              involves contacting them with phenanthrene. The polypeptides and host cells are also used in bioremediation in which they oxidise aromatic compound such as indene, 1,2-dhydronaphthalene,

alpha subunit that contains substituted anino acids at specific CC positions. The polypeptides and host cells are useful for preparing CC (1)-(15,2R)-cis-napththalene dihydrodiol, (-or +)-cis-biphenyl-3,4-CC dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, (-is-1,2-CC dihydrodiol), (-or +)-cis-biphenyl-3,4-CC dihydrodiol, (-or +)-cis-biphenyl-3,4-CC dihydrodiol, (-or +)-cis-biphenyl-3,4-CC dihydrodiol, (-or +)-cis-biphenyl-3,4-CC dihydrodiol, (-or +)-cis-biphenyl-3,4-CC dihydrodyl-1,2-dihydroxy-1,2-3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, which cc involves contacting them with phenanthrene (-or -)-cis-biphenyl, phenanthrene which cc involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, cc benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzofuran, cc acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, cc dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a cc corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents an aphthalene dioxygenase (NDO) mutant alpha subunit, given in the cx exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The present invention describes a naphthalene dioxygenase (NDO) or NDO CC related complex (I) comprising several polypeptides which contain an C alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-C dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which cis-locate involves contacting them with naphthalene, biphenyl, phenanthrene, C indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-C dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which cells are also used in bioremediation in which they oxidise an C involves contacting them with phenanthrene. The polypeptides and the compatitic compound such as indene, 1,2-dihydronaphthalene, cells are also used in bioremediation in which they oxidise an C aromatic compound such as indene, 1,2-dihydronaphthalene, cells are useful for preparing thenyl, fluorene, dibenzo(1,4)dioxan, cenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, cenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, cenaphthylene, paphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer. C anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the cexamplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁

The polypeptides and cc the host cells are also useful for preparing 1,2-dihydroxy-1,2-c involves contacting them with phenanthrene. The polypeptides and the compound such as indene, 1,2-dihydrophenanthrene which cc involves contacting them with phenanthrene. The polypeptides and the cc host cells are also used in bioremediation in which they oxidise an cc aromatic compound such as indene, 1,2-dihydronaphthalene, oxidise an cc denaphthylene, naphthalene, 1,2-dihydronaphthalene, cd dibenzo(1,4)dioxan, cc dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cc cells are useful for preparing chiral diols for use in the polymer, cc resin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the cc exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches 448;

Pseudomonas sp.

strain NCIB 9816-4; naphthalene dioxygenase;

```
involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1.2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1.2-dihydroxy-1.2-cdihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1.2-dihydronaphthalene, oxidise an aromatic compound such as indene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, acenaphthylene, paptidioxan, biphenyl, fluorene, oxidise and the host cells are useful for preparing chiral diols for use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Вþ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         20
The present invention describes a naphthalene dioxygenase (NDO) or NDO related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-cdihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dih
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel naphthalene dioxygenase mutant having a specific substitution for preparing chiral diols for use in the pharmaceutical or rubber industry and for carrying out
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WO200037480-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pseudomonas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches 448;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represents naphthalene dioxygenase (NDO) from the Pseudomonas sp. strain NCIB 9816-4, which is used in the exemplification of the present invention.

CC involves contacting them with naphthalene, biphenyl, phenanthrene, clindene, and 1.2-dihydronaphthalene respectively. The polypeptides and cthe host cells are also useful for preparing 1.2-dihydroxy-1.2-cc dihydrophenanthrene or 3.4-dihydroxy-3.4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the clindentic compound such as indene, 1.2-dihydronaphthalene, or aromatic compound such as indene, 1.2-dihydronaphthalene, cc benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzofuran, cc dibenzothiophene, 9.10-dihydroanthracene, dibenzofuran, cc dibenzothiophene, 9.10-dihydroanthracene, or 9.10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cc clls are useful for preparing chiral diols for use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the cc exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches 448;

                                                                                                                                                                                           CC The present invention describes a naphthalene dioxygenase (NDO) or NDO CC related complex (1) comprising several polypeptides which contain an CC alpha subunit that contains substituted amino acids at specific CC positions. The polypeptides and host cells are useful for preparing CC (-)-(15.2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3.4-CC dihydroxyindan, 1.2-dihydroxy-1, 2.3.4-tetrahydronaphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1.2-dihydroxy-1, 2.3.4-tetrahydronaphthalene, which CC involves contacting them with naphthalene respectively. The polypeptides and the host cells are also useful for preparing 1.2-dihydroxy-1, 2-CC dihydrophenanthrene or 3.4-dihydroxy-3.4-dihydrophenanthrene which CC involves contacting them with phenanthrene. The polypeptides and the host cells are also useful for benanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1.2-dihydronaphthalene, CC acenaphthylene, naphthalene, anthracene, phenanthrene, dibenzo(1.4)dioxan, CC dibenzothiophene, 9.10-dihydroanthracene, or 9.10-dihydrophenanthrene a CC corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, CC exist, pharmaceutical or rubber industry. The present sequence represents an apphthalene dioxygenase (NDO) mutant alpha subunit, given in the CC exemplification of the present invention.

•,

The present invention describes a naphthalene dioxygenase (NDO) or NI related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                involves contacting them with naphthalene, biphenyl, phenanthrene, chindene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-cc dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an caromatic compound such as indene, 1,2-dihydronaphthalene, dibenzofuran, compound such as indene, phenanthrene, dibenzofuran, compound such aphthalene, biphenyl, fluorene, dibenzofuran, compound such as in the polymer, compound of the polymer industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the cyc exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                           involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a naphthalene dioxygenase (NDO) or NI related complex (1) comprising several polypeptides which contain an alpha subunit that contains substituted and several subunit that contains substituted and several positions. The polypeptides and host cells are useful for preparing (-)-(1S,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (1S,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, (1S,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, ci
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   dihydroxyIndan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, Indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which
                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DЬ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Qy
                            The present invention describes a naphthalene dioxygenase (NDO) or NDO CC related complex (I) comprising several polypeptides which contain an CC alpha subunit that contains substituted amino acids at specific CC positions. The polypeptides and host cells are useful for preparing (-1-(15,78)-cis-naphthalene dihydrodiol, (-0+)-cis-biphenyl-3,4-CC dihydroxyindan, 1,2-dihydroxy-1,2-3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, clindene, and 1,2-dihydroxy-1,2-3,4-tetrahydroxphaphthalene, which involves contacting them with naphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-CC dihydroxphenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the clinder compound such as indene, 1,2-dihydronaphthalene, or aromatic compound such as indene, 1,2-dihydronaphthalene, cells are also used in bioremediation in which they oxidise an accompathylene, naphthalene, anthracene, phenanthrene, dibenzo(1,4)dioxan, cells are useful for preparing them phenanthrene, dibenzo(1,4)dioxan, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2000-452174/39.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC (-)-(15,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-CC dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-CC dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydronaphthalene, which cis involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1,2-dihydronaphthalene respectively. The polypeptides and CC the host cells are also useful for preparing 1,2-dihydroxy-1,2-CC dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydroxy-1,2-CC dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which cc involves contacting them with phenanthrene. The polypeptides and the CC host cells are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1,2-dihydronaphthalene, cells are also used in bioremediation in which they oxidise an CC acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, CC dibenzo(clohelpt-1-ene, anthracene, phenanthrene, dibenzofuran, CC dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a CC corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, cesin, pharmaceutical or rubber industry. The present sequence represents camphthalene dioxygenase (DO) mutant alpha subunit, given in the camplification of the necessary invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represent a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with nephthalene, bibhenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-the polypeptides and dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               related complex (I) comprising several polypeptides which contain an alpha subunit that contains substitution acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                Sequence
